Online

1. Press the ONLINE button to take the printer offline

2. Press ENTER to go into Menu mode

3. Press the UP + DOWN arrows to unlock the control panel

4. Press ▷ to get to the **Quick Setup** Menu and press ENTER

5. Press ▽ until you get to **Ribbon End Point**

6. Press ◁ until you get to desired end point setting, **Lighter -1** to **Lighter -10**, and press ENTER

7. Press the ONLINE button to put the printer back online

Ribbon End Point: This parameter adjusts the point at which the system will declare the ribbon as being expended. The life count will always be from 100% to 0%. If a lighter setting is selected the system will extend the time it takes to reach 0%. This value can be adjusted at any time, and the display will automatically adjust to show the correct % relative to the new end point.
